

The evo series: as diverse as your customers

CUSTOMER FOCUS

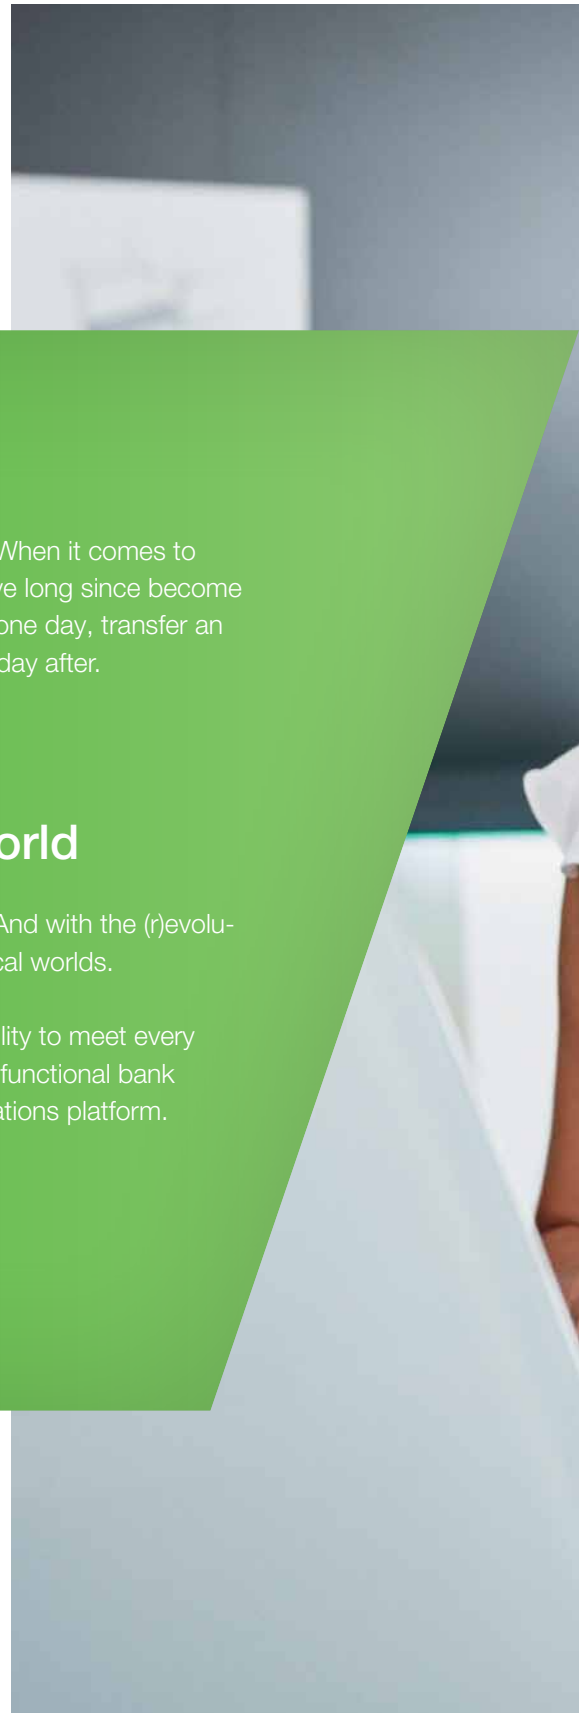

Indispensable for your success

The banking customers of today are more discerning than ever before. When it comes to money, as far as they are concerned the digital and physical worlds have long since become one. They take it for granted that they can withdraw money quickly on one day, transfer an amount on the next, and then speak to an advisor in person during the day after.

Point-of-service in a multi-channel world

KEBA's solutions are just as diverse as the requirements of customers. And with the (r)evolutionary evo series, we have built a bridge that links the digital and physical worlds.

The scope of performance of the evo series provides you with the flexibility to meet every requirement, from the ATM with cash recycling technology and the multifunctional bank terminal, to the unique fusion of a self-service system with a communications platform.

EFFICIENCY, that is not at the expense of your customers

With the evo series, the digitisation of services and individual customer communications no longer represents a contradiction in terms.

Modern communication technologies open up a wide range of opportunities, which we use to make the digital world more personal and humane.

Interaction – smart like a tablet

The perfect linkage between a 19" multi-touch display and light-assisted user guidance fulfils the high expectations of today's banking customers in a unique manner.

The evo series' innovative "SmartSurface" user interface represents a combined customer display and communications platform, and thus ensures increased contact with your clientele.

Communications – with that little extra something

Height adjustment for the differing needs of your banking customers, a rear view mirror camera for an enhanced feeling of security, or as a platform for marketing campaigns, and "SmartFrame" software, which independent of the 15" customer application, uses the the available area of the 19" screen with maximum efficiency.

Discover **VERSATILITY** with the (r)evolutionary evo series

Meeting increasing customer requirements is one of the biggest challenges facing banks.

The evo series creates fresh scope for sound decisions and investments, in order to ensure that you are in a sound position at all times.

Our experts develop individual ideas and solutions to match your specific needs.

KePlus R10
KePlus RT10

With a new cash recycling module and modern interactive concept, the KePlus R10 for indoor applications and the KePlus RT10 for wheelchair clearance, as well as outdoor use, constitute the ideal ATMs for every branch.

KePlus F10 KePlus FT10

The KePlus F10 for indoor applications and the KePlus FT10 for wheelchair clearance, as well as outdoor use, already equip you today for the demands of tomorrow. Their function and design can be adapted at any time in line with the respective location and specific requirements

KePlus FX10

The KePlus FX10 represents the KePlus F10 with an added “wing” and combines every type of cash transaction in a single machine. It provides you with maximum performance and in spite of its modular design operates as a complete system.

PERFORMANCE has many faces

Cash recycling in a new dimension

The ultra-compact cash recycling module opens up a whole range of new opportunities, as up to eight denominations can be recycled with only five cassettes. This optimises processing, increases efficiency and creates scope for cashier-free branches, thereby rendering automated teller units and employee-assisted self-service obsolete.

All cash is located securely in the safe thus preventing any external access to the banknote processing components.

KEBA technology is now even “greener”

The cash recycling module and the intelligent, energy-saving concept reduce costs and conserve resources. With its evo series, KEBA has further intensified its commitment to energy-efficient technologies.

Design as a corporate claim

Your corporate design determines the colours, shapes and materials for the evo cash recycling systems that will become an integral part of your branches. The systems are thus unmistakable, but always open for new applications.

INNOVATION that is more customer-oriented than ever before

Individualisation is a safe bet

Whenever the next digitalisation step reaches your bank, with the evo series you are already equipped today for the demands of tomorrow.

The models in the evo series remain open for new functions and even for design adaptations. This enables you to protect your investment and create a stable foundation for your banking network of the future.

Barrier-free in every regard

It is sometimes the case that the adaptation of branches to match the needs of differing groups of people, e.g. with regard to public access to ICT products and services, confronts banks with major challenges.

Therefore, during the development of the evo series, the diverse requirements of all users (customers, service technicians, equipment operators) were considered from a “design4all” perspective and then implemented.

Free access and the associated entitlement to equal treatment is a fundamental right, which the evo series supports. It fulfils both the international EN301549 ICT accessibility standard, which is valid for all EU member states, and the ADA2010, the “mother” of all accessible design standards. In addition, both the KePlus RT10 and the KePlus FT10 offer wheelchair clearance (up to a maximum of 35cm).

FUTURE inclusive: the evo series from KEBA

Banks will increasingly have to follow their customers.

We at KEBA regard addressing the wishes and needs of our clients as our no. 1 task. Consequently, in this connection, we go a decisive step further. Because for us, not only you, but also your customers constitute the measure of all things.

- How and where will they complete their banking transactions tomorrow and in the years to come?
- In future, will you go to your customers, or will they come to you at your branch?

These and other similar questions are already keeping us extremely busy and making us consider innovative concepts for the banking sector of tomorrow.

Speak to our experts:

Let us jointly develop ideas in order that we can find the ideal approach to the future for your bank.
